

## GPS Mounts

We've tried to come up with a better design ourselves and just can't compete with the versatile and inexpensive RAM Mounts! Made of very tough plastic, RAM designed a cradle for each Model of GPS that attaches to a ball-joint at each end of the handle-bar mount. This allows you to change the position of the GPS based on lighting, glare, or preference of position at any time. You can attach it in a position protecting the GPS from vulnerability to falls as well. I like to tuck mine down as close to the bars as possible. At this price, you just can't beat the RAM Mount. Durable, positionable, easy to rig, and compatible with all types of handlebars.
